

Remote Operation

Even more on-line **radio transceivers are available to you for remote operation.** With the "remotehams" system, you can remotely control the stations yourself, directly over the internet.

Everyone can receive with them; to transmit your need a valid amateur radio license.

How to use this for JOTA? Well, e.g. you want to contact that far-away Scout station, but you only have a small transmitter available. Log on to the remotehams system, check in to a radio that is closer to the station you want to talk to, and remotely transmit and receive from there. Also, it is an excellent way to check if the signals you transmit can be received elsewhere in the world. Just tune the remote receiver to your transmit frequency. Can you hear your own signal and how does it sound at the other side of the globe?

[Download the remote-control software here.](#) The software package and the use of the system is free of charge.
