

Your own radio

Each Scout can have its own radio station..... and have some JOTA practice before the weekend.

To train radio amateurs, there is a fully on-line amateur "radio" environment, running on a server connected to the internet.

Together with software on your computer, you can have your own "radio". It behaves exactly as a short-wave amateur-radio transceiver: you can make live contacts with other users anywhere in the world, experience the same types of radio garble and interference, play with different transmission modes and many more. Without the need for an amateur radio license (since you are not transmitting on airwaves). An excellent practice for Scouts to get acquainted with amateur radio and prepare themselves for JOTA. The software, called Hansphere, can be used free of charge for a trial period. Just enough to be prepared for your JOTA experience...!

You can find detailed info and [download the software here](#).
